G SERIES

Next level security for commercial operations.

PROTECT

Seriously protective.

For companies serious about protecting their team, space, and assets, the G Series control panel goes beyond sounding an alarm to next-level security you can feel—day and night. It's your business partner in protection, designed to seamlessly connect and integrate every component of your alarm system with round-the-clock monitoring, instant alerts, and control in the palm of your hand.

From the moment you open your doors to the last person leaving and every hour overnight, the G Series is seriously protective. For safety beyond intrusion, trust beyond compare.

SAFETY FIRST

Secure all areas and access points.

As a building owner, office manager, or head of facilities, we understand that when it comes to managing the security of a commercial building, responsibilities are endless.

Whether it's ensuring the safety of employees, protecting server rooms, managing energy costs, or consistently arming and disarming your system, the G Series works smarter and harder, seamlessly integrating every aspect of your security.

SCENARIOS

How our intrusion systems, cameras, control panels, and alarms fill gaps in security.

PROPPED DOORS

The control panel can be programmed to tell when the door has been open too long, keeping the perimeter secure.

SUSPICIOUS LOITERING

Our control panels along with our cameras can be programmed to detect if a person is outside too long or where they aren't allowed.

EMERGENCY LOCKDOWN

Panic buttons can be carried by personnel or placed in a fixed, discrete location. They can signal a silent alarm, a call for help, and/or initiate a lockdown.

AUTOMATICALLY ARMING THE ALARM

When it comes to setting or resetting alarms, the only way to ensure they're not inadvertently forgotten is to have them automatically arm themselves.

ZONED ACCESS AREAS

Areas like HR, the IT Room, and testing and development spaces may need to be controlled separately due to confidential data and important equipment.

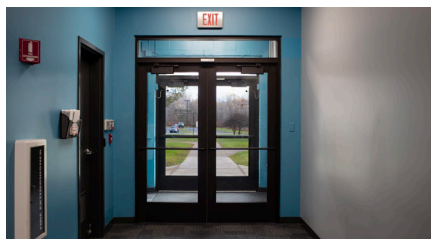

AFTER HOURS INTRUSION

Our alarm system will detect an intrusion, immediately producing an audible alert at the source, and sending multiple notifications to key personnel.

SECURING OVERHEAD DOORS

Door contacts connected to the control panel can be programmed to alert staff if the door is left open longer than necessary.

KEEPING EMERGENCY EXITS CLEAR

Doors can be monitored to ensure they are not blocked in the event that employees need to safely exit. Alerts can be sent to key personnel.
