

Next level security for financial institutions.

PROTECT

Seriously protective.

For companies serious about protecting their team, space, and assets, the G Series control panel goes beyond sounding an alarm to next-level security you can feel—day and night. It's your business partner in protection, designed to seamlessly connect and integrate every component of your alarm system with round-the-clock monitoring, instant alerts, and control in the palm of your hand.

From the moment you open your doors to the last person leaving and every hour overnight, the G Series is seriously protective. For safety beyond intrusion, trust beyond compare.

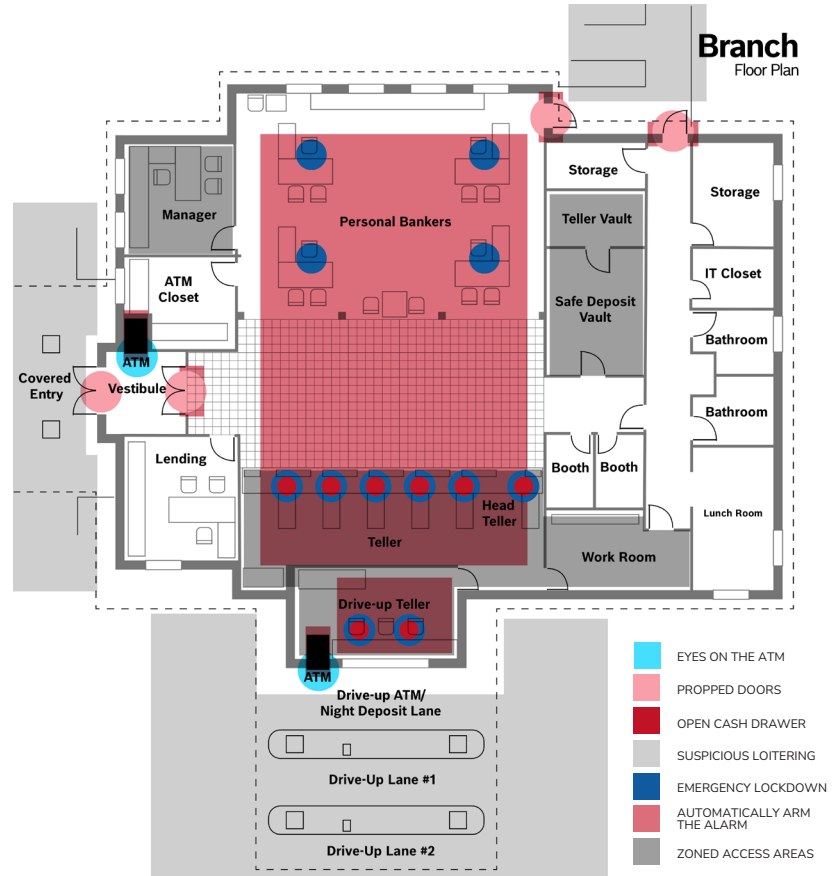

SAFETY FIRST

Secure all areas and access points.

For all financial institutions, the G Series is your proactive partner in making sure your assets, employees, and customers are protected at all costs.

Whether taking care of a transaction in a branch, accessing a safety deposit box, resupplying a stand-alone ATM, or getting \$20 out for lunch, people need to feel confident that they're safe.

We're in the business of ensuring the 24/7 safety of customers, employees, staff, equipment, and assets. G Series provides financial security that's always one step ahead.

SCENARIOS

How our intrusion systems, cameras, control panels, and alarms fill gaps in security.

EYES ON THE ATM

ATMs are easy targets. Our cameras and sensors are integrated into one control panel that determines what's happening before issues arise.

PROPPED DOORS

The control panel can be programmed to tell when the door has been open too long, like five minutes instead of one, and send alerts to appropriate staff.

OPEN CASH DRAWER

Through simple control panel programming, sensors can detect when the drawer has been open too long, leaving the cash drawer unsecured, creating a risk for theft.

SUSPICIOUS LOITERING

Our cameras can be programmed to detect if a suspicious person is loitering near an ATM or in an unauthorized area.

EMERGENCY LOCKDOWN

Panic buttons can be hardwired and placed in a fixed discrete location. They can signal a silent alarm, a call for help, and/or initiate a lockdown.

AUTOMATICALLY ARM THE ALARM

When it comes to setting or resetting alarms, the only way to ensure they're not inadvertently forgotten is to have them automatically arm themselves.

ZONED ACCESS AREAS

Areas like the vault, safety deposit boxes, manager's office, IT or ATM closet, ATM chest, and even entry/exit doors need secure access management.
