

Bosch Mobile Access

The smart addition to your access control solution

The Bosch Mobile Access solution is a smart addition to the existing classic access card. It's easy to use, easy to manage and easy to install.

How does Mobile Access work?

- You can use your smartphone instead of a physical card to request access
- You assign all mobile access rights centrally in your access solution
- You can transmit access credentials via e-mail or QR code
- You record all access events securely and centrally in your access control solution on premise

Mobile Access can be fully integrated into your current Bosch access control system, enhancing its capabilities and providing added benefits.

Easy to use,
comfortable and
innovative solution

Advanced
security with
state-of-the-art
encryption

Data privacy
guaranteed,
biometric data on
user's smartphone

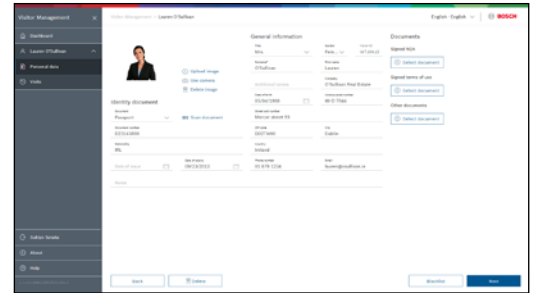

Simplify and modernize your access control system with Bosch Mobile Access

Mobile Access application for smartphones

Access control premium readers with BLE (Bluetooth Low Energy)

Access Management software to administrate visitors and employees

Innovative

Offering the same security features as physical access cards, but on a private device everyone already carries around all day: their smartphone.

Easy

All visitor and employee data can easily be managed through an intuitive system, offering addressees their credentials ahead of their visit in just only click.

Secure

Mobile Access provides an even higher level of security than most physical access cards, ensuring that only individuals with valid mobile credentials can access designated areas in a building.
