

Signature scanner

Integrated Employee and Visitor Signature Management with Signotec and Bosch Systems

To facilitate capture of employee or visitor signatures the signature pads from signotec are integrated with Bosch [Building Integration System \(BIS\)](#) and [Access Management System \(AMS\)](#). Simply connect one of the supported signotec pads via USB to the BIS Access Engine / AMS workstation, wait until installation is finished and start working.

For any new employee the signature can be captured and stored on the server. From there they can be printed on the ID card.

For visitors the captured signature can be stored in the system for verification with any following visit. With its 155 x 120 x 10 mm, the SIGMA pad is extremely compact, tough and thereby perfect for any use. When used stationary, the SIGMA stays in its comfort zone and adapts itself to your personal needs, due to the flat construction and the optional vertical penholder.

- Affordable LCD signature tablet fully integrated with Bosch Building Integration System (BIS) and Access Management System (AMS)
- Captures signatures directly from the BIS Access Engine / AMS cardholder or visitor registration dialog
- Ultra-slim design – only 1 cm thick to fit on most reception desks
- High-resolution display for luminous text and graphics giving the best edge impression of BIS Access Engine / AMS
- No special pen or batteries required for convenient use
- USB cable is firmly linked with the pad (Anti-theft protection)

Compatibility

signotec

Systems signotec pads
SIGMA, OMEGA and
GAMMA

Bosch products

[Building Integration System \(BIS\) v4.1 and higher](#)

[Access Management System 3.0 and higher](#)

Verticals with high frequency of visitors: office buildings, industrial sites, hospitals, prisons, governmental buildings, etc.

Verticals with tough requirements to compliance/regulations: transport, energy, critical infrastructure, etc.

Key features

Cardholder Registration of Visitors and Employees

- Capture and securely save the signature of a visitor or employee during registration.
- Compare the stored e-signature with an ID document shown in any upcoming visits.
- Delete the e-signature when data privacy laws require.
- Often required for compliance reasons.

Quick installation and intuitive use of signotec pads

SIGMA

OMEGA

GAMMA

A signature is registered in only 2 steps:

1. During registration process in BIS Access Engine / AMS click the button "Record signature" below tab "signature".
Effect: The signotec pad switches to input mode.
2. Sign your name on the signotec pad and click when you are finished.
Effect: The signature is now saved in BIS Access Engine.

At **KEENFINITY**, we are a globally leading provider of innovative security and professional communication solutions. With a heritage of quality and reliability, and a vision driven by innovation, we are shaping the future of communication, security, and manufacturing excellence. We exceed the expected. We proudly stand behind industry-leading brands such as Bosch, Electro-Voice, Dynacord, RTS and Telex – names that are synonymous with quality, reliability, and innovation.
